PROFESSIONAL SUMMARY

Senior Frontend Developer with **4+ years** building and shipping production AI SaaS platforms in **React.js, Next.js, Redux Toolkit, and Tailwind CSS**. Led frontend delivery of **2 live AI products**, cut page-load times by **35 to 40%** and improved Lighthouse scores from **62 to 85+**. Experienced in architecture, multi-domain authentication, payment integration and deployment across testing and production. Skilled at turning complex Figma designs into scalable, high-performance interfaces and leading small frontend teams.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3, Python

Frameworks & Libraries: React.js, Next.js, Redux Toolkit, Context API, Zustand, React Router, Axios

UI & Styling: Tailwind CSS, Shadcn/ui, Radix UI, Material UI, Pixel-Perfect UI, Figma-to-Code, Responsive & Mobile-First Design, Cross-Browser Compatibility, Web Accessibility, SEO

APIs & Real-Time: REST API Integration, WebSocket Streaming, Dynamic Data Fetching, JSON, Postman

Authentication & Security: JWT, OAuth 2.0, Google Sign-In, Apple Sign-In, OTP Login, RBAC, Protected Routes

Performance: Lazy Loading, Code Splitting, Memoization, SSR / ISR / SSG, Lighthouse Tuning, Core Web Vitals, Bundle Analysis, List Virtualization

Payments & Billing: Razorpay Payment Gateway, Checkout Flows, GST Calculation, Payment History

Deployment: Vercel, Multi-Environment Deployment (Demo / Production), Environment Configuration, Production Releases

Tools & Practices: Git, GitHub, VS Code, Figma, Chrome DevTools, JIRA, Agile / Scrum, Code Reviews

PROFESSIONAL EXPERIENCE

Senior Frontend Developer

Nov 2024 – Present

BuddhiMatrix Pvt. Ltd. (Products: Alpie.ai & 169Pi)

Mumbai, India

- Own the full frontend for **2 AI SaaS products, Alpie.ai and 169Pi**, covering architecture, design system, feature work, and production release. Both are live with active users.
- Lead a **team of 5 frontend engineers**, setting the architecture direction, code-review process, and frontend standards that keep the team shipping fast with consistent, high-quality code.
- Handle deployment across demo/testing and production, including environment setup and stable production releases.
- Brought initial page-load time down by **35 to 40%** with lazy loading, code splitting, React memoization, and tighter Redux state management.
- Built the **cross-domain Single Sign-On (SSO) and authentication system** for the 169Pi developer platform, enabling users to sign in once on the public website (169pi.com) and seamlessly access the protected API dashboard (playground.169pi.ai) across domains using OAuth 2.0, Google Sign-In, and OTP-based authentication.
- Restructured a legacy, hard-to-maintain frontend into a **modular, scalable architecture**, introducing a reusable component library, clear separation of concerns and consistent state-management. The result is a codebase that is easier to extend, faster to build features in and quicker onboarding for new developers.

- Built and maintained **React.js applications** across education, travel and business domains, delivering responsive, cross-browser experiences.
- Converted **20+ Figma designs** into pixel-perfect, reusable React components with Tailwind CSS and Material UI, establishing design-token consistency across client projects.
- Raised Lighthouse performance scores from **62 to 85+** via image optimization, API response caching, render-cycle tuning and bundle-size reduction.
- Integrated **REST APIs** with structured error handling and dynamic rendering, building a reusable component-driven architecture for faster, consistent delivery.

KEY PROJECTS

Alpie.ai – AI Chat & Deep Research Platform

Tech Stack: React.js, Redux Toolkit, WebSocket, Tailwind CSS, Shadcn/ui

- Engineered a **multi-mode AI chat interface** (Alpie Core, Coding Agent, Deep Research, Guest) with response streaming and a custom markdown/code-block rendering engine. Built persistent sidebar conversation history with search, plus pagination on the sidebar and main chat view for smooth loading.
- Built **real-time multi-user collaboration** over WebSocket, letting teams co-work in shared conversations through an invite-based access system. Paired it with a workspace dashboard that centralizes chats and resources (files, images) under unified search.
- Shipped **OTP authentication with protected routes**, plus **RBAC** for collaboration that lets admins assign roles, create sub-admins and remove members. Added a reusable **i18n multilingual framework**, guided onboarding tour and centralized settings to strengthen security and cross-region accessibility.

169Pi – AI API Platform & Developer Ecosystem

Tech Stack: Next.js, Redux Toolkit, Razorpay, Tailwind CSS, Radix UI

- Led the **169Pi developer platform from scratch to production** as frontend lead, building the auth and access flow with sign-in on 169pi.com, seamless redirect into the dashboard at playground.169pi.ai, and protected developer surfaces (API keys, usage, billing, playground, docs).
- Built the **developer dashboard** for API key management, usage analytics and a **Razorpay-integrated** top-up flow that collects billing details and shows full payment history.
- Shipped an **interactive API playground** with model switching, live Python code preview that updates on parameter changes and ready-to-use prompts, plus a structured multi-section documentation portal.

KEY ACHIEVEMENTS

- Led the **169Pi developer platform from zero to production** as frontend lead and shipped core features for **Alpie** as a senior frontend developer. Both are live with active users.
- Cut **page-load time by 35 to 40%** and lifted **Lighthouse scores from 62 to 85+**, improving Core Web Vitals and perceived speed across both platforms.

EDUCATION

Bachelor of Technology – Mechanical Engineering
KIET Group of Institutions | CGPA: **8.13 / 10**

2017 – 2020

LANGUAGES

English (Professional Proficiency) • **Hindi** (Native Proficiency)
